1	B.E	II-IV	DATA BASE SYSTEM

A Guide for execution of Lab Courses

Vision and Mission of the Institute

Vision of the Institute:-

To impart quality technical education with strong ethics, producing technically sound engineers capable of serving the society and the nation in a responsible manner.

Mission of the Institute:-

M1: To provide adequate knowledge encompassing strong technical concepts and soft skills thereby inculcating sound ethics.

M2: To provide a conducive environment to nurture creativity in the teaching- learning process.

M3: To identify and provide facilities which create opportunities for deserving students of all communities to excel in their chosen fields.

M4: To strive and contribute to the needs of the society and the nation by applying advanced engineering and technical concepts.

Vision and Mission of the Department

Vision of the Department:-

To produce quality IT professionals, with an ability to adapt to ever changing IT needs of local, national and international arena, through effective teaching & learning, interactions with alumni and industry.

Mission of the Department:-

M1: To provide a holistic learning environment for students through ethical practices.

M2 : To provide quality infrastructure through practical exposure to the latest technology requirements.

M3: To train the students in soft skills to excel in placements and competitive exams at higher level the industry ready.

M4: To have a healthy Industry - Institute interaction through faculty development programs, student internships, guest lectures and using the latest teaching learning methodologies.

M5: To provide an effective platform to meet the industrial requirement and provide a research oriented environment for the faculty to meet the continuous societal needs.

Program Educational Objectives

The Program Educational Objectives of Information Technology Program area as follows:

PEO1:- Graduates will excel in their professional career and higher education in Information Technology and chosen fields.

PEO2:- Graduates will be prepared for a successful career, to meet the diversified needs of industry, academia and research.

PROGRAM SPECIFIC OUTCOMES (PSO's)

PSO1: efficient Develop information management using latest systems development tools catering to the globally changing requirements in multi-disciplinary domains.

PSO2: Manage real time IT projects with consideration of human, financial, ethical environmental and factors understanding of policy and implications.

1. AIM OF THE LIFT:

The main aim of the LIFT programme is to innovate, modify the existing facilities in labs, to create awareness among the students and develop Industry –Institution interactions and reach the standards in laboratories

2. FUNCTIONS OF THELIFT:

- I. To create better understanding concepts of LIFT and other lab related activities among the staff and lab technicians for better improvement.
- II. To Arrange LIFT Presentations from each department about the lab activities by the staff handling the labs. (Lab Planners)
- III. To Prepare GAP ANALYSIS: This involves collection of requirements from each lab of every department, information about expansion of labs, repairs and maintenance of labs etc.
- IV. To arrange Industrial Visits/ Industrial training programs in coordination with concerned lab staff and Heads of the departments.
- V. A Report on Shadow Engineering: This involves arrangement of Industrial and Practical learning, Submission of Industrial Visit report, Technical Survey reports and Market Survey of a product for development in laboratories.
- VI. Verification of all the laboratories in every department by the LIFT Team along with the Principal and the concerned HODs, to check whether the activities are going according to LIFT guidelines, to check the Record Keeping, Lab Manuals and Viva sessions etc.
- VII. Check for LEAD Experiments and its follow-up.
- VIII. Submission of proposals related to R&D, Project and Consultancy from lab staff to the Principal for furtherapprovals.

LAB IMPROVEMENT FOR FUTURETRENDS PROGRAMME (LIFT)

INDEX

CONTENTS:

- 1. OBJECTIVES AND RELEVANCE
- 2. SCOPE
- 3. PREREQUISITES
- 4. SYLLABUS AS PERJNTUH
- 5. LABSCHEDULE
- 6. SUGGESTEDBOOKS
- 7. WEBSITES (USEFULLINKS)

1. OBJECTIVES AND RELEVANCE:

The main objective of the LIFT concept in lab course is to provide practical hands on experience for each student by providing them with good exposure to different experiments and to uplift the knowledge levels of the student, with different applications in various fields.

2. SCOPE:

The main scope of the LIFT lab course is to cover all the experiments as per the schedule given in the prescribed week wise periods. With this, a student can better understand the concepts and operating systems so that he could get better knowledge about each lab.

3. PREREQUISITES:

The basic level idea related to each experiment should be provided to the students before conducting main lab course. Following details are to be explained related to experiment:

- 1. Introduction to experiment 30min
- 2. The Operating of the equipment/instrument/software
- 3. Record of ExperimentalResults.
- 4. Sample Calculations / ExecutablePrograms

4. SYLLABUS AS PER OU:

The lab course should be planned as per the OU syllabus. In this, LEAD experiments should also be included in the cycle of experiments.

5. (A) LABSCHEDULE:

The lab schedule should be planned once in a week. The week wise scheduled experiment should be completed.

Batches	week-1	week-2	week-3	week-4	week-5	week-6
B1	Basic Queries	Exp.1, 2	Exp.3, 4	Exp. 5, 6, 7	Exp. 8, 9	Exp. 10
B2	Basic Queries	Exp.1, 2	Exp.3, 4	Exp. 5, 6, 7	Exp. 8, 9	Exp. 10

(B) Scheme of Evaluation:

The scheme of evaluation for internal and external exams as follows:

LAB INTER	<u> </u>	o Day Evalution-	15]	Internal Exam	-10
Uniform	Observation & Record	Performance Of the Experiment	Result	Viva	Write up	Execution & Results	Viva
Marks-3	Marks-3	Marks-3	Marks-3	Marks-3	Marks-4	Marks-3	Marks-3
			Total Ma	rks-25			

LAB EX	TERNAL:		
S.NO	Write up	Final Evaluation	Viva
1	1. Aim	Based on correctness of the program	Based on understanding of
	2. Procedure	and Results	Experiment and theoretical questions
	3. Program		in the related subjects
	4. Expected		
	output.		
Marks	20	20	10
	ı	Total Marks-50	

6. SUGGESTEDBOOKS:

The suggested books should be recommended to the students as per the OU syllabus prescribed.

7. WEBSITES (USEFULLINKS):

The useful links should be provided to the students, where they can get an easy access to the knowledge of the experiment.

DATABASE SYSTEM LAB

CONTENTS:

- 1. OBJECTIVES ANDRELEVANCE
- 2. SCOPE
- 3. PREREQUISITES
- 4. SYLLABUS AS PERJNTUH
- 5. LABSCHEDULE
- 6. SUGGESTEDBOOKS
- 7. WEBSITES (USEFULLINKS)

1. OBJECTIVES ANDRELEVANCE

The main objective of the lab course is to gain practical knowledge of the language

translation peculiarities by designing a complete translator for a mini language.

2. SCOPE

The scope of this lab is to make students to acquire knowledge in different phases and passes of compiler, and specifying different types of tokens by lexical analyzer,

and also able to use the compiler tools

3. PREREQUISITES

Oracle-Sql

Visual Basic 6.0

4. OU Syllabus:

PREAMBLE:

This lab covers the experiments in Database System lab. The OU has given 6

experiments in the syllabus out of which first two experiments are based on

the lexical Analyzer, following four experiments deals with predictive parser,

LALR bottom up parser for given language, and convert the BNF rules into

Yacc form, and Program to generate machine code from the abstract syntax

tree generated by the parser

1. Design a Lexical analyzer for the above language. The lexical analyzershould

ignore redundant spaces, tabs and newlines. It should also ignorecomments.

Although the syntax specification

(Unit-1)

Objective: The main objective of this program states that identifiers can be

Ι

arbitrarily long; you may restrict the length to some reasonable value.

Prerequisites: Require knowledge in different phases and passes of Compiler, and specifying different types of tokens by lexical analyzer.

Applications: A lexer forms the first phase of a compiler frontend in modern processing, and is generally done in a single pass.

3. Implement the lexical analyzer using JLex, flex or lex or other lexical analyzer generating tools.

Objective: The main objective of the programs is student able to learn the computer language tools (preprocessor Directives)

Prerequisites: Require knowledge of data structures in compilation, regular expressions and c code called rules

Applications: Flex is a tool for generating scanners. A scanner, sometimes called a tokenizer, is a program which recognizes lexical patterns in text.

3. Design Predictive parser for the givenlanguage

Objective: The main objective of the programs is student able to learn the Recursive Predictive Parsing and Non-Recursive predictive parsing

Prerequisites: Require knowledge of constructing LL Parsing table and top-down parsing

Applications: Able to recover errors in predictive parsing.

4. Design LALR bottom up parser for the abovelanguage.

Objective: The main objective of the programs is student able to learn the operator precedence parsing algorithm, shift reduce parsing

Prerequisites: Require knowledge of constructing LR Parsing table and Bottom-up parsing

Applications: Able to recover errors phrase-level error recovery and panic mode error recovery in LALR bottom up parsing

- 5. Convert the BNF rules into Yacc form and write code to generate abstractsyntax tree.
- 6. Write program to generate machine code from the abstract syntax treegenerated by the parser. The following instruction set may be considered as targetcode. The following is a simple register-based machine, supporting a total of 17 instructions. It has three distinct internal storage areas. The first is the set of 8 registers, used by the individual instructions as detailed below, the second is an area used for the storage of variables and the third is an area used for the storage of program. The instructions can be preceded by a label. This consists of an integer in the range 1 to 9999 and the label is followed by a colon to separate it from the rest of the instruction. The numerical label can be used as the argument to a jump instruction, as detailed below.

In the description of the individual instructions below, instruction argument types are specified as follows:

R

specifies a register in the form R0, R1, R2, R3, R4, R5, R6 or R7 (or r0, r1, etc.).

L

specifies a numerical label (in the range 1 to 9999).

V

specifies a "variable location" (a variable number or a variable location pointed to by a register - see below).

A

specifies a constant value, a variable location, a register or a variable location pointed to by a register (an indirect address). Constant values are specified as an integer value, optionally preceded by a minus sign, preceded by a # symbol. An indirect address is specified by an @ followed by a register.

So, for example, an A-type argument could have the form 4 (variable number 4), #4 (the constant value 4), r4 (register 4) or @r4 (the contents of register 4 identifies the variable location to be accessed).

The instruction set is defined as follows:

LOAD A,R

loads the integer value specified by A into register R.

STORE R,V

stores the value in register R to variable V.

Objective: The main objective of the two programs is student able to learn formal mathematical way to describe the language. Translate each sub-tree of the decorated AST (Abstract syntax Trees) into intermediatecode.

Prerequisites: Require knowledge of linked lists and trees

Applications: Able to use the formally define the grammar of a language, so that there is no disagreementorambiguity BNF is so unambiguous that there is a lotof mathematical theory around these kinds of grammars

LEAD: 1. Configure a CFG which will accept the user input string following the given CFG.

S ->aBb/ccA

 $A \rightarrow b/c$

B ->a/b

2. Check whether the given program contains comments.

5 (A) LAB SCHEDULE:

CYCLE1:

Batches	week-1	week-2	week-	week-	week-	week-	week-	week-
B1(501 to 512)	Demo & Introduction	Exp.1	Exp.1	Exp.2	Exp.2	Exp.2	Exp.3	test
B2(513 to 524)	Demo & Introduction	Exp.1	Exp.1	Exp.2	Exp.2	Exp.2	Exp.3	test
B3(525 to 536)	Demo & Introduction	Exp.1	Exp.1	Exp.2	Exp.2	Exp.2	Exp.3	test
B4(537 to 548)	Demo & Introduction	Exp.1	Exp.1	Exp.2	Exp.2	Exp.2	Exp.3	test
B5(549 to 560)	Demo & Introduction	Exp.1	Exp.1	Exp.2	Exp.2	Exp.2	Exp.3	test

	Batches	week-	week-	we ek- 3	week-	wee k-5	week -6	week-	week -8	week-9	wee k- 10	week-	we ek- 12	wee k- 13	we ek- 14
	B1,B2,B3	viva					viva					viva			
	B4,B5,B1		viva					viva					viv a
